Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of curves ...

Let us do 1 more example here, we want to find the arc length of $y = \ln(x)/2 - x^2/4$. So we do not integrate the function directly, we look at its derivative. f' is, well, the derivative of $\ln(x)$ is $1/x$ so this is $1/2x$ - the derivative of x^2 is $2x$. So the 2 and 4 cancel, so we get $x/2$. So then we are going to find $f'(x)$. So that is a 2, so $1/4x$.

In mathematics, the trigonometric functions (also called circular functions, angle functions or goniometric functions) are functions of an angle. They relate the angles of a triangle to the lengths of its sides. Trigonometric functions are important in the study of triangles and modeling periodic phenomena, among many other applications.
