In human anatomy, the axillary vein is a large blood vessel that conveys blood from the lateral aspect of the thorax, axilla (armpit) and upper limb toward the heart. There is one axillary vein on each side of the body. Its origin is at the lower margin of the teres major muscle and a continuation of the brachial vein. This large vein is formed by the brachial vein and the basilic vein.

Axillary vein - Wikipedia

Tinnitus is the perception of sound in the head or the ears. The term tinnitus derives from the Latin word tinnire, meaning to ring. Typically, an individual perceives the sound in the absence of outside sounds, and the perception is unrelated to any external source.

Tinnitus: Introduction, Philosophy, and Classification ...

In anatomy, a process (Latin: processus) is a projection or outgrowth of tissue from a larger body. For instance, in a vertebra, a process may serve for muscle attachment and leverage (as in the case of the transverse and spinous processes), or to fit (forming a synovial joint), with another vertebra (as in the case of the articular processes). The word is used even at the microanatomic level ...

The trapezius muscle is a large, paired, triangular shaped muscle located superficially in the back of the neck and thorax. When viewed together, the two trapezius muscles together roughly form a diamond or trapezoid shape, responsible for the trapezius name. Trapezius is one of the superficial posterior axioappendicular, or extrinsic muscle pairs.
