A complex number is a number that can be expressed in the form $a + bi$, where a and b are real numbers, and i is a solution of the equation $x^2 = -1$. Because no real number satisfies this equation, i is called an imaginary number. For the complex number $a + bi$, a is called the real part, and b is called the imaginary part. Despite the historical nomenclature "imaginary", complex numbers are ...

Positive and negative face. Face is the public self-image that every person tries to protect. Brown and Levinson defined positive face two ways: as "the want of every member that his wants be desirable to at least some others executors" (p. 62), or alternatively, "the positive consistent self-image or 'personality' (crucially including the desire that this self-image be appreciated and ...

A conformal mapping, also called a conformal map, conformal transformation, angle-preserving transformation, or biholomorphic map, is a transformation $w=f(z)$ that preserves local angles. An analytic function is conformal at any point where it has a nonzero derivative. Conversely, any conformal mapping of a complex variable which has continuous partial derivatives is analytic.

10. How large a tire can I fit with X" of lift? There is no way to provide an exact answer to this question, at least in general. There are so many variables, the actual diameter and width of the tire, the profile of the tread, the size and offset of the wheel, the suspension mods on the vehicle, your willingness to make minor or major mods to the body (fender trimming) all come into play.
