Developmental psychology is the scientific study of how and why human beings change over the course of their life. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire lifespan. Developmental psychologists aim to explain how thinking, feeling, and behaviors change throughout life.

Child development entails the biological, psychological and emotional changes that occur in human beings between birth and the conclusion of adolescence, as the individual progresses from dependency to increasing autonomy. It is a continuous process with a predictable sequence, yet having a unique course for every child. It does not progress at the same rate and each stage is affected by the ...

The generic Sirtuin catalytic core comprises an NAD⁺-binding Rossmann-fold subdomain and a small Zn²⁺-binding module, and the active site is located in the cleft between these subdomains (Fig. 2a) (Sanders, Jackson, & Marmorstein, 2010; Schutkowski et al., 2014). Human SIRT1-7 show only weak, isoform-specific substrate sequence preferences due to subtle differences in their polypeptide ...
