The superposition principle, also known as superposition property, states that, for all linear systems, the net response caused by two or more stimuli is the sum of the responses that would have been caused by each stimulus individually. So that if input A produces response X and input B produces response Y then input (A + B) produces response (X + Y).. A function that satisfies the ...

Maps. A discrete-time, affine dynamical system has the form of a matrix difference equation:  $x_{k+1} = Ax_k + b$ , with A a matrix and b a vector. As in the continuous case, the change of coordinates  $x \rightarrow x + (I - A)^{-1}b$  removes the term b from the equation. In the new coordinate system, the origin is a fixed point of the map and the solutions are of the linear system  $A^n x = 0$ .
