What's new 2013-08-01 The freetext search index for the Linux kernel is currently in the process of being rebuilt, as it has suffered some form of corruption. The freetext search functionality will be absent or spotty while this happens, but at least the server errors that some of you have reported lately should be gone now.

LXR / The Linux Cross Reference

The Linux kernel is a free and open-source, monolithic, Unix-like operating system kernel. The Linux family of operating systems is based on this kernel and deployed on both traditional computer systems such as personal computers and servers, usually in the form of Linux distributions, and on various embedded devices such as routers, wireless access points, PBXes, set-top boxes, FTA receivers ...

Kdump is a kernel crash dumping mechanism that allows you to save the contents of the system's memory for later analysis. It relies on kexec, which can be used to boot a Linux kernel from the context of another kernel, bypass BIOS, and preserve the contents of the first kernel's memory that would otherwise be lost.. In case of a system crash, kdump uses kexec to boot into a second kernel ...
