Equations. The foundational axioms of fluid dynamics are the conservation laws, specifically, conservation of mass, conservation of linear momentum (also known as Newton's Second Law of Motion), and conservation of energy (also known as First Law of Thermodynamics). These are based on classical mechanics and are modified in quantum mechanics and general relativity.

Toothed timing belts made from rubber and kevlar are commonly used to time overhead camshaft automobile engines. Compared with other camshaft drive systems, timing belts have low design, engineering and production costs, low noise levels, low mass (and consequently low inertia), low space requirements, and no need for lubrication. Timing belt systems are also simpler and more versatile than ...
