Northwest School of Animal Massage, Equine and Canine Massage

Canine parvovirus (CPV, colloquially parvo) is a contagious virus mainly affecting dogs, and thought to originate in cats. The current consensus is that the feline panleukopenia virus mutated into CPV2. Parvo is highly contagious and is spread from dog to dog by direct or indirect contact with their feces. Vaccines can prevent this infection, but mortality can reach 91% in untreated cases.

Urinary tract infections are relatively common in CKD cats. Problem urinary tract infections (2012) Chew DJ & Westropp JL American College of Veterinary Surgeons Proceedings states "UTI occurs in approximately 30% of all cats with chronic renal failure (CRF), many within one year of diagnosis of CRF.". Since most cats with CKD are older, they are at additional risk.
