During the Golden Age of Islam, especially during the 9th and 10th centuries, mathematics saw many important innovations building on Greek mathematics. The most notable achievement of Islamic mathematics was the development of algebra. Other notable achievements of the Islamic period are advances in spherical trigonometry and the addition of the decimal point to the Arabic numeral system.

"The Unreasonable Effectiveness of Mathematics in the Natural Sciences" is the title of an article published in 1960 by the physicist Eugene Wigner. In the paper, Wigner observed that the mathematical structure of a physical theory often points the way to further advances in that theory and even to empirical predictions.

Terminology and background. Throughout this paper, the terms client and server will be used to denote the user and host parties in a direct authentication protocol. Unless stated otherwise, the client is assumed to be a human user who, like typical computer users, can only remember relatively short passwords [7, 13]. Although a user may employ a piece of software to negotiate the authentication ...
