During the Golden Age of Islam, especially during the 9th and 10th centuries, mathematics saw many important innovations building on Greek mathematics. The most notable achievement of Islamic mathematics was the development of algebra. Other notable achievements of the Islamic period are advances in spherical trigonometry and the addition of the decimal point to the Arabic numeral system.

"The Unreasonable Effectiveness of Mathematics in the Natural Sciences" is the title of an article published in 1960 by the physicist Eugene Wigner. In the paper, Wigner observed that the mathematical structure of a physical theory often points the way to further advances in that theory and even to empirical predictions.

Cathy Kessel has been working hard to incorporate the feedback from this blog and from other places into final versions of the progressions. Here is the close to final version of the progressions up through Ratios and Proportional Relationships. Major edits include an expanded preface, a comprehensive introduction, and some significant additions to the fractions progression.
