The fundamental theorem of calculus is a theorem that links the concept of differentiating a function with the concept of integrating a function.. The first part of the theorem, sometimes called the first fundamental theorem of calculus, states that one of the antiderivatives (also called indefinite integral), say  $F$ , of some function  $f$  may be obtained as the integral of  $f$  with a variable bound ...

In calculus, a derivative test uses the derivatives of a function to locate the critical points of a function and determine whether each point is a local maximum, a local minimum, or a saddle point. Derivative tests can also give information about the concavity of a function.. The usefulness of derivatives to find extrema is proved mathematically by Fermat's theorem of stationary points
